an action ends the turn; the next turn starts from the new board
Game
one of 110 hidden games, offline
board
Prompt
opener, board image, kept history (128K)
Model reasons
thinking tokens on the local server
Python tool
runs code, calls action()
1 Yield after 8,192 tokens without an action (was 2,048)
the turn resumes with its opening message (the opener) and the board image sent again; a later yield re-sends them less often
tokens
Server: SGLang on one RTX PRO 6000 (96 GB); 9 hours, no internet
faster serving acts here
Qwen3.8-Flash-Next, 4-bit, draft model; fine-tuning acts here
2 448 of 512 experts: memory for 14 games at once
3 Fail-closed checks: a dead server or a run under 20 levels raises an error
priority scheduler, prefix cache, watchdog
